

Repurposed power plant – the renewables take over

Experience Austria Tour 3

Experience Austria Tours

The Austrian Wind Energy Association offers you the opportunity to experience Austrian solutions in the field of renewable energy during EWEA 2013. This is your chance to experience some premier research projects in the field of renewable energy of Austrian companies.

Zwentendorf projects

Zwentendorf atomic power plant is the only in the world which, although completed in 1978, will never go into operation. Some may wonder, why it's still standing. But why not use this site to highlight the possibilities of and needs for renewable energy? The new owner, EVN, revived the area and uses it to produce clean and save energy by installing high performance photovoltaik panels. After a tour through the plant – a fascinating journey back to the 70s - the photovoltaik park and other renewable energy projects are presented.

Schedule

- Wednesday, 06 February 2013
 - 13:30 Departure from Messe Wien
 - 18:00 Arrival at Messe Wien

Important information:

Due to the low temperatures in the plant **warm clothes and shoes** are absolutely necessary!
