

Press Release

Green reliable energy from EFOY Pro fuel cells

During construction of wind turbines the staff depends on having power for the aviation obstruction lights until the wind turbine is grid connected. Using a generator is not an eco- friendly solution, it also needs to be refuelled several times during construction period.

With EFOY Pro fuel cells wind turbine manufacturers obtain a reliable energy solution that saves time for refuel and is an energy friendly solution that runs for a longer period of time than traditional energy solutions. The time issue and the fact that EFOY Pro fuel cells run on green energy are just some of the reasons why several wind turbine manufacturers have decided to use this solution.

AWILCO-MULTIPLEX, the supplier of EFOY Pro Solutions in the wind industry, has specialized in eco-friendly products since 2005.

AWILCO-MULTIPLEX is dedicated to take care of the environment supplying power products. For AWILCO-MULTIPLEX it's not only a matter of polluting less, it's also very important to have a product that is reliable, fits the demands of the wind industry, easy and safe to use, and also saves time and money. Visit our booth 7A54, to see some of the EFOY Pro fuel cell systems, or to see the upcoming High Power Back-up Fuel Cell System.
