

10-years reanalysis downscaling at a 3km grid in the North Sea

Idar Barstad & Torge Lorenz

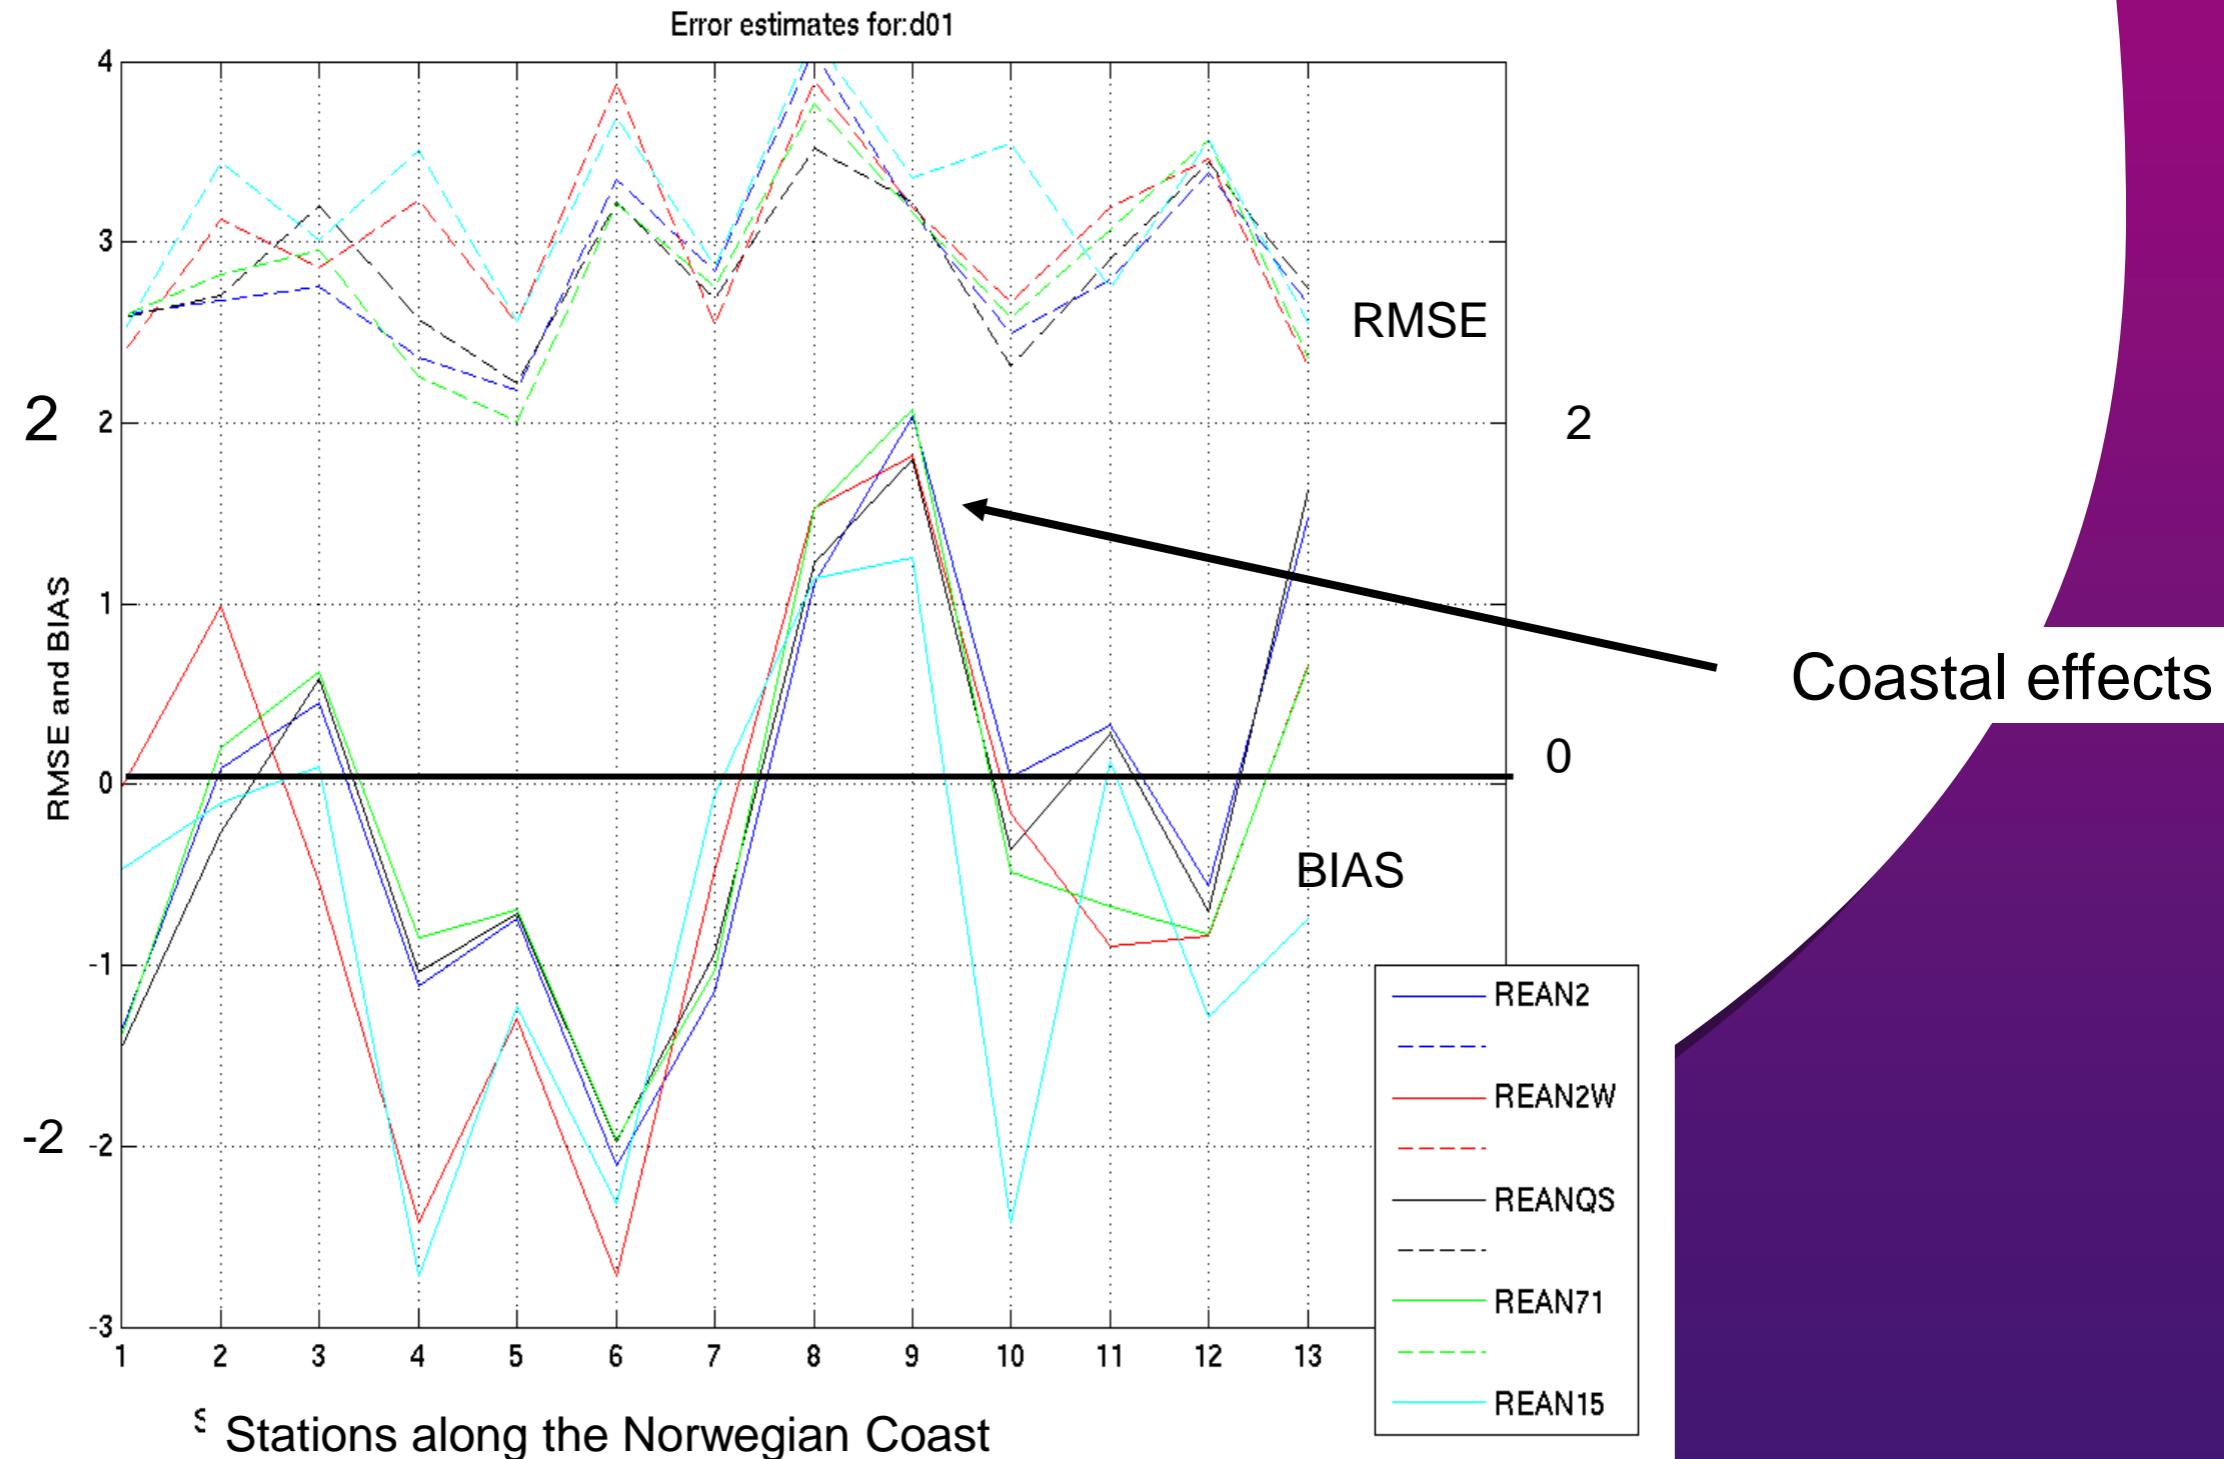

idar.barstad@uni.no

Motivation:

Fill temporal and spatial gaps in data sparse areas.

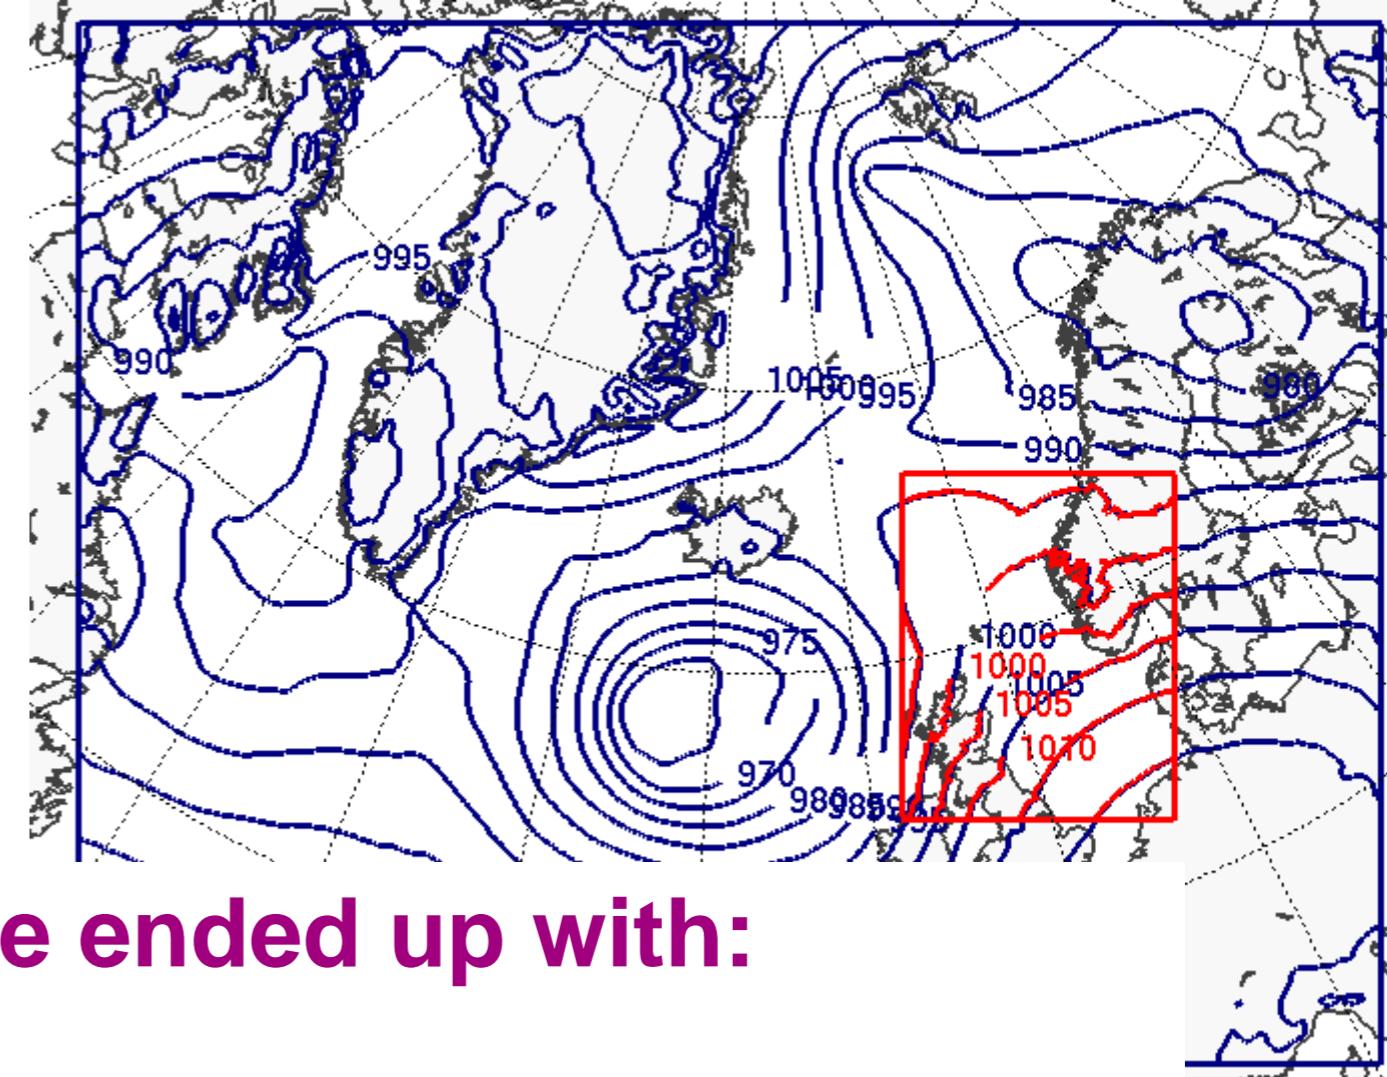

High detail level across many different parameters (turbulence, wind shear etc.)

Strong local influence along the rugged coastline

Test period for the model setup

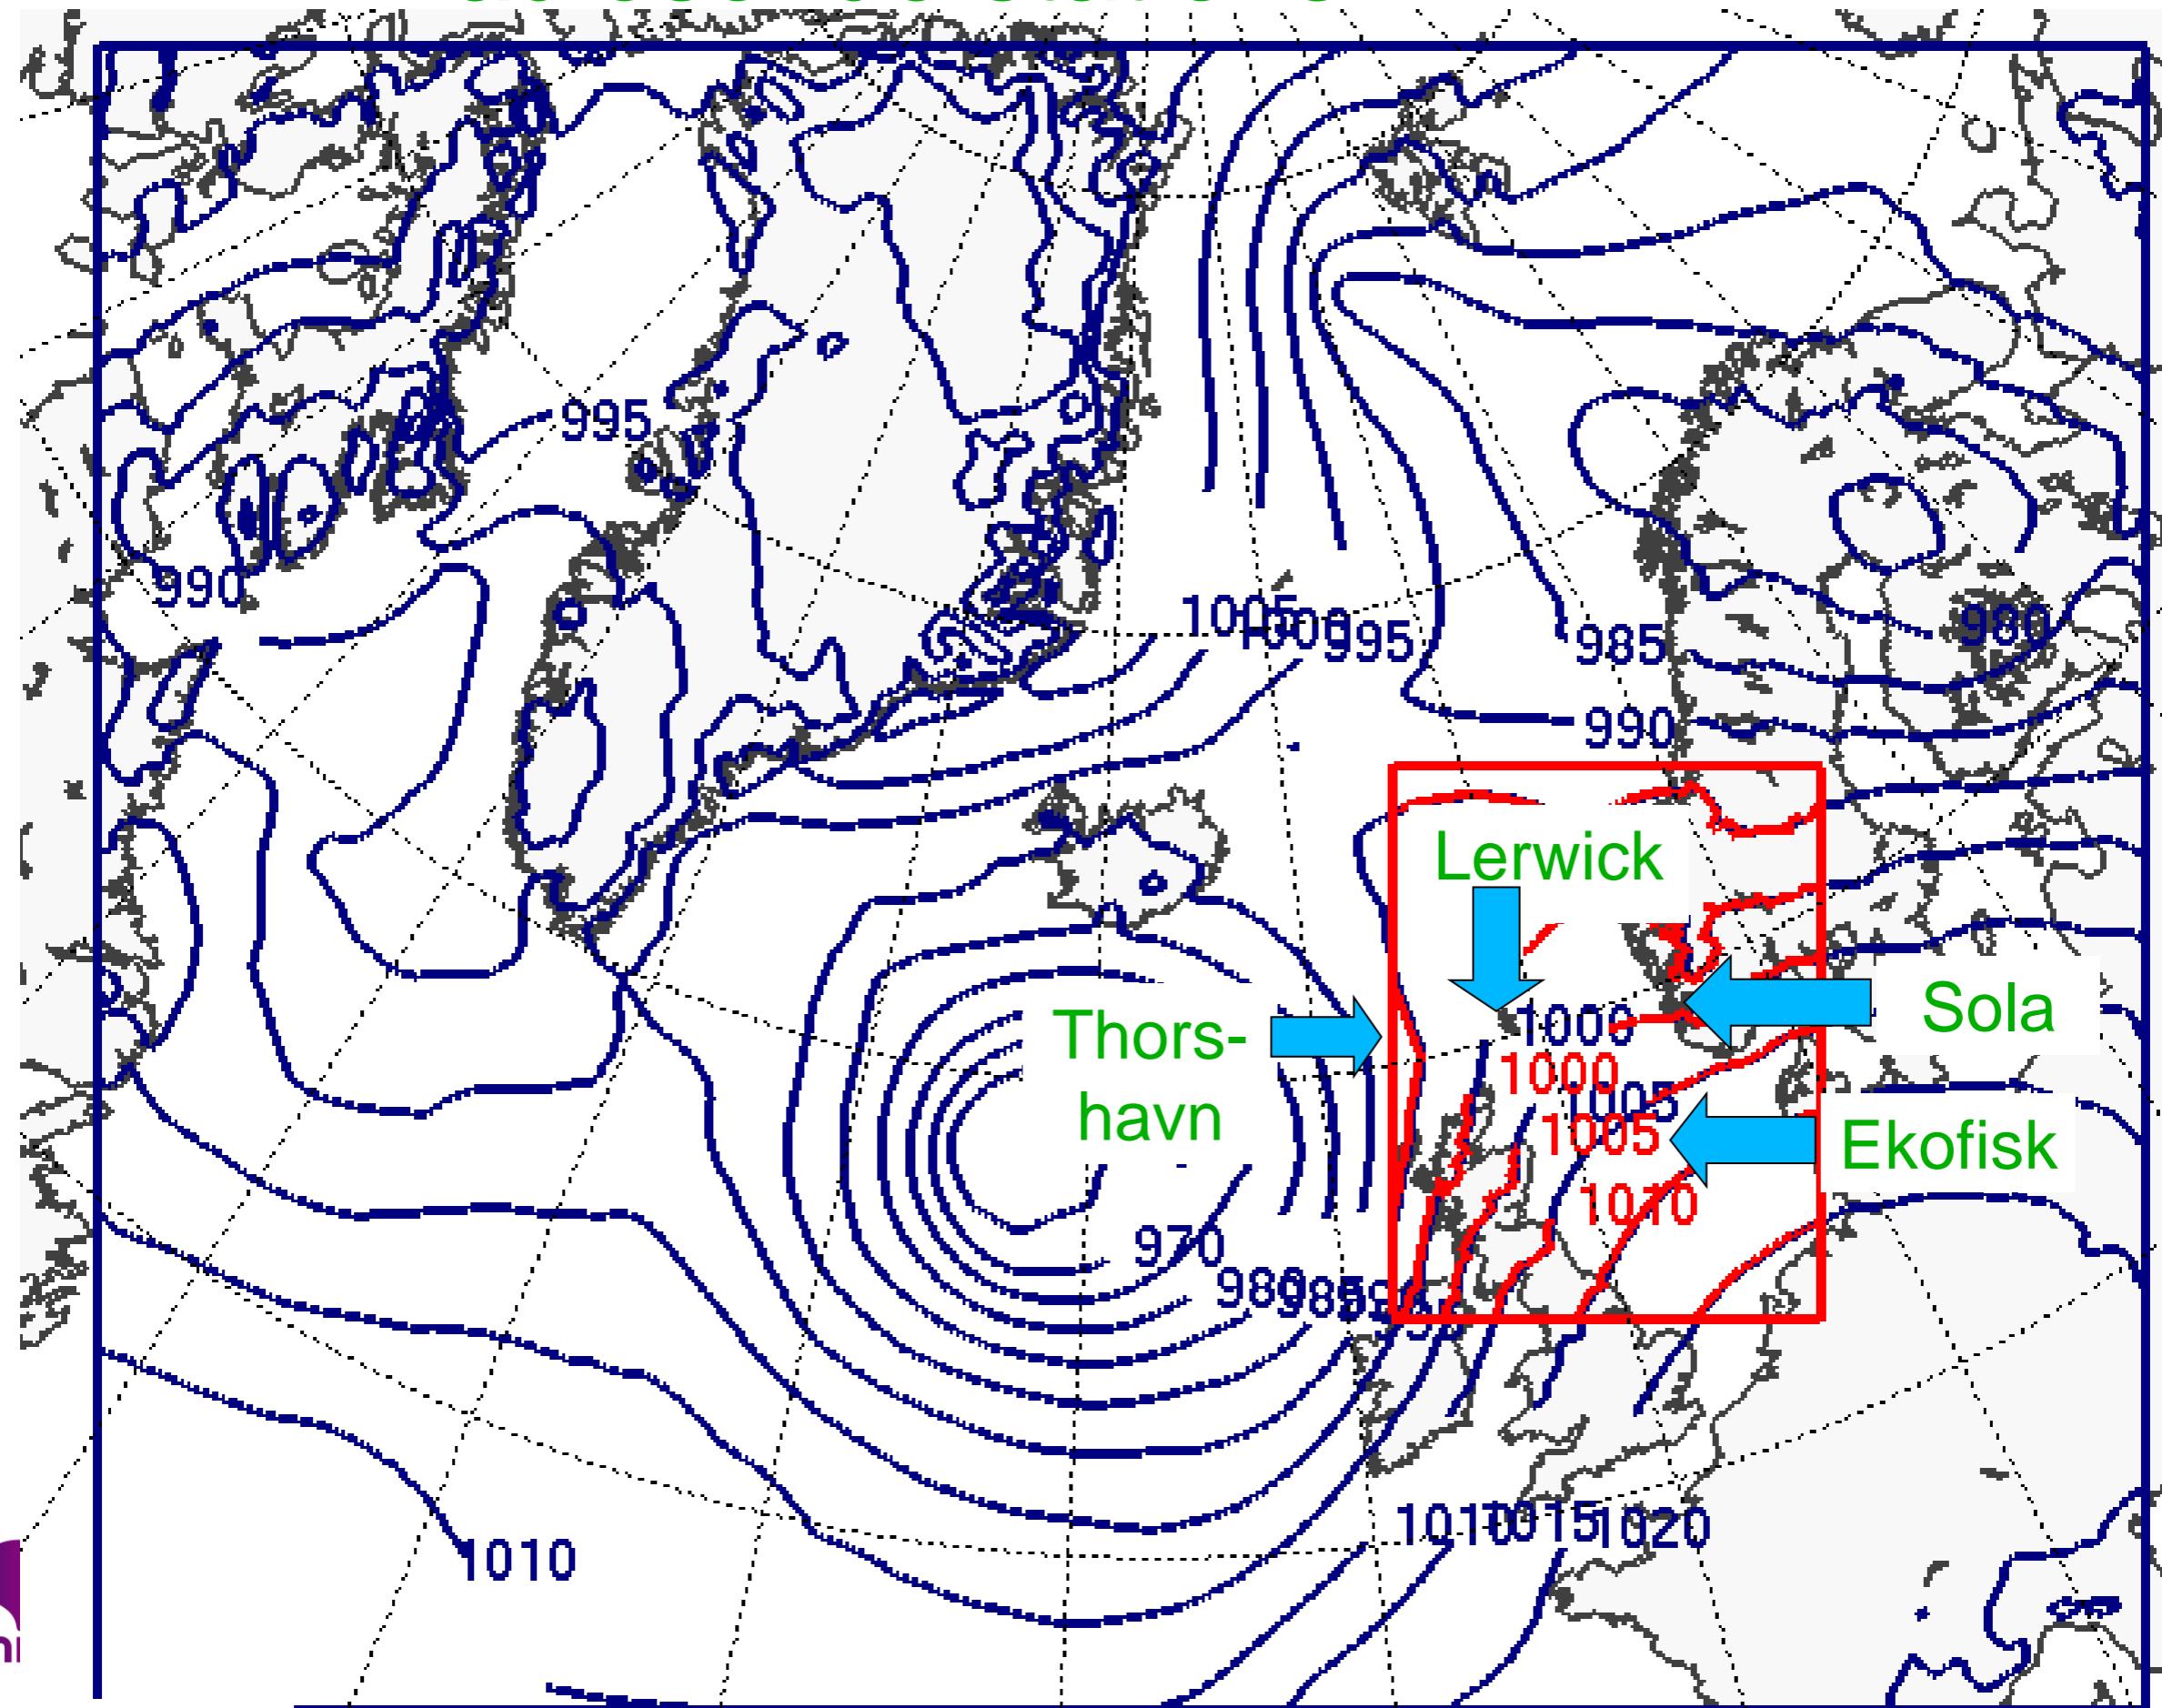

15Feb-20Mar 2008 – 5 weeks

From 5 weeks test cases, we ended up with:

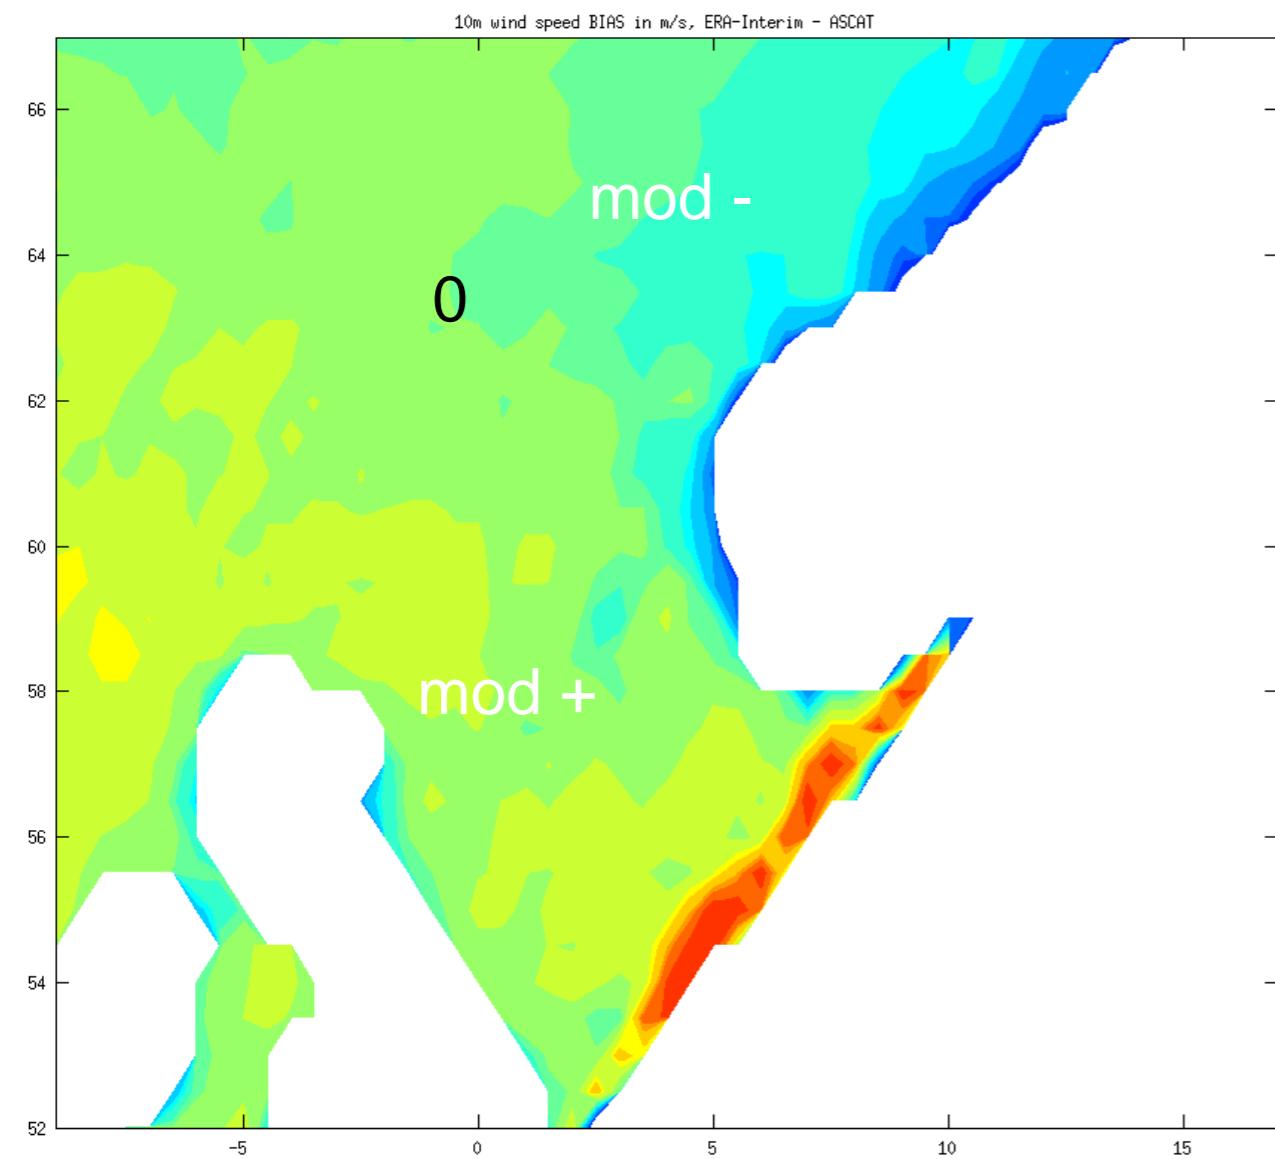

- 9-3 km grid, 51 levels
- 2-way coupling between nests
- FDDA assimilation of satellite wind data (QSCAT)
- MYJ- pbl scheme
- Spectral nudging >1000 km
- Eralnterim data as input

Radiosonde stations

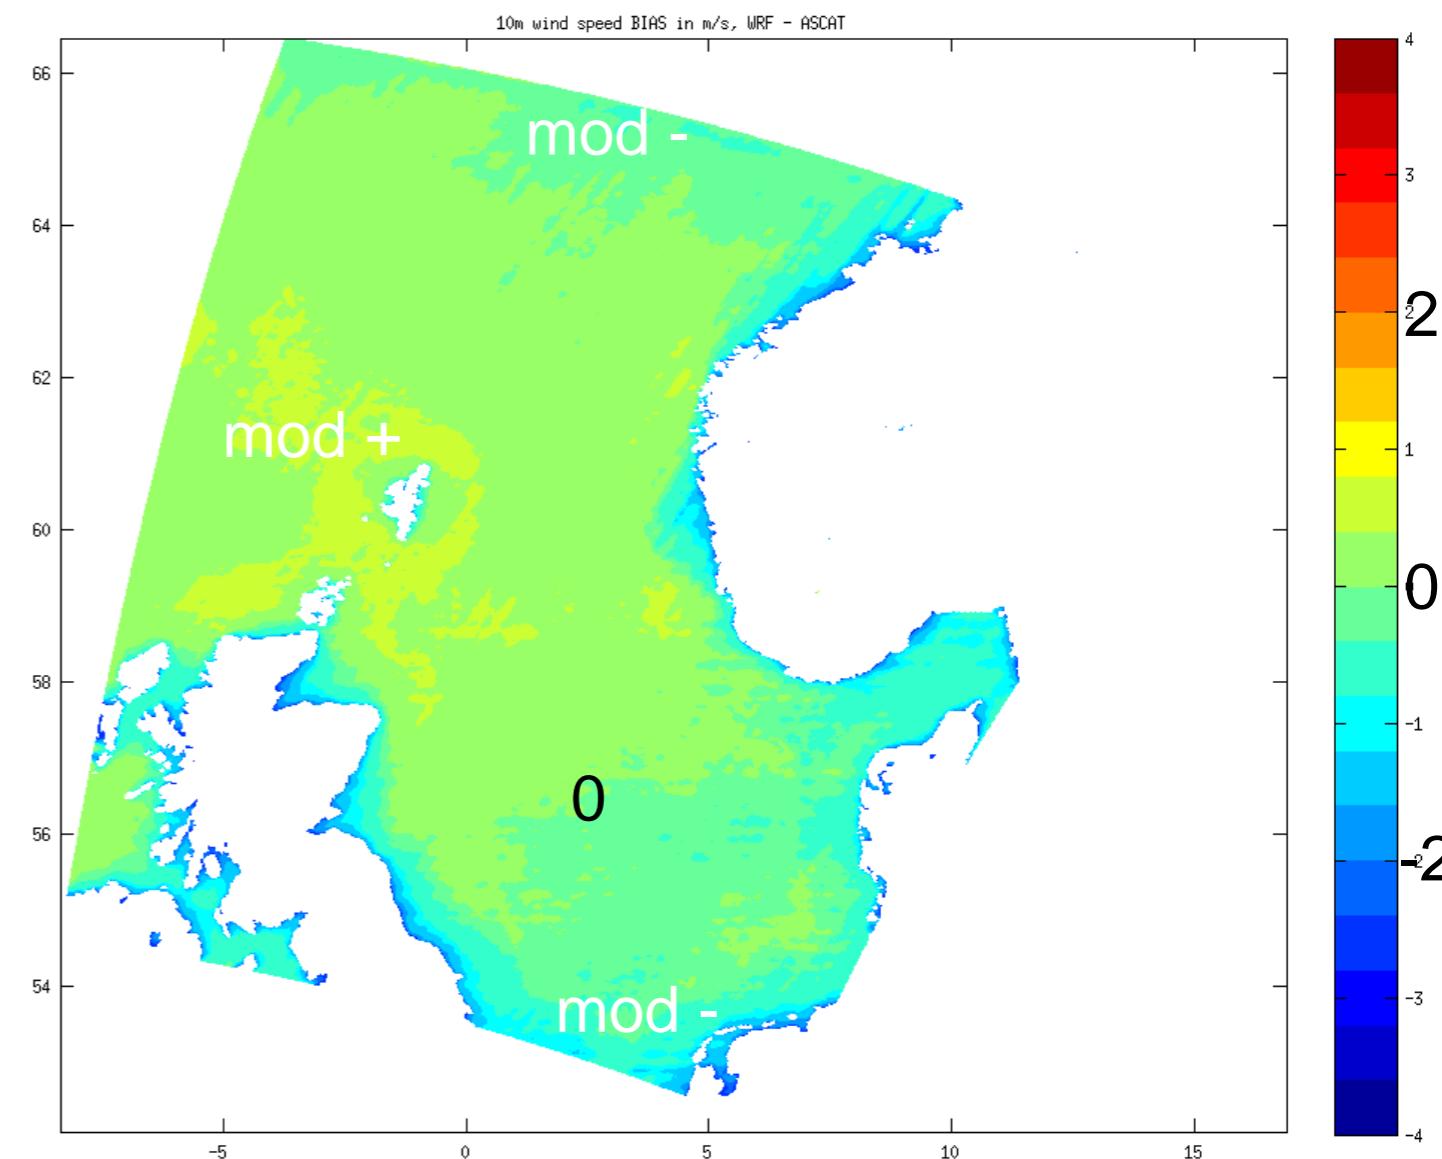

BIAS (mod-ASCAT) for 2008

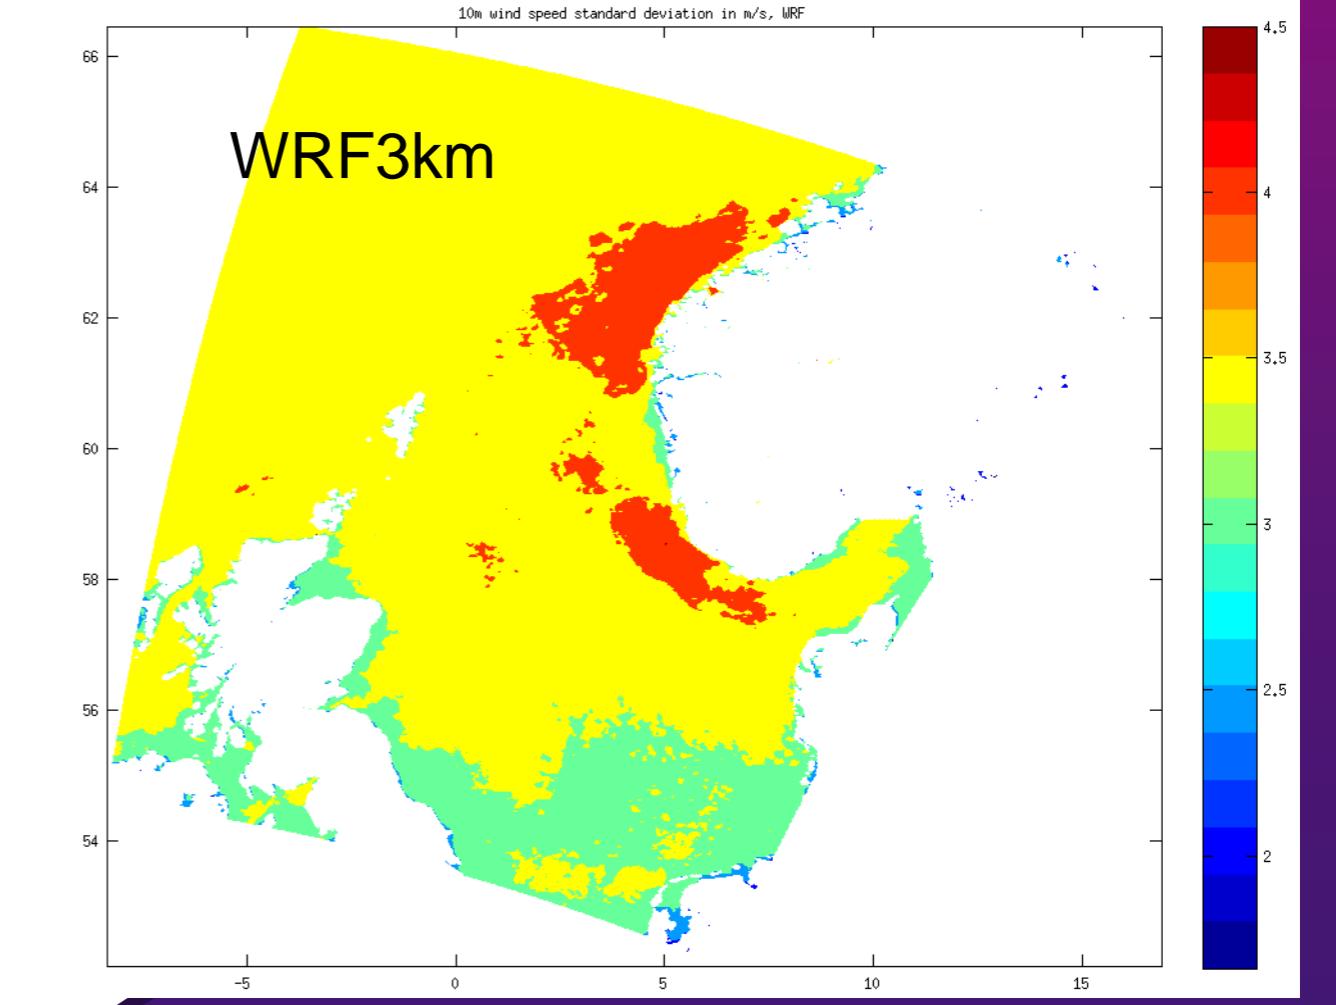

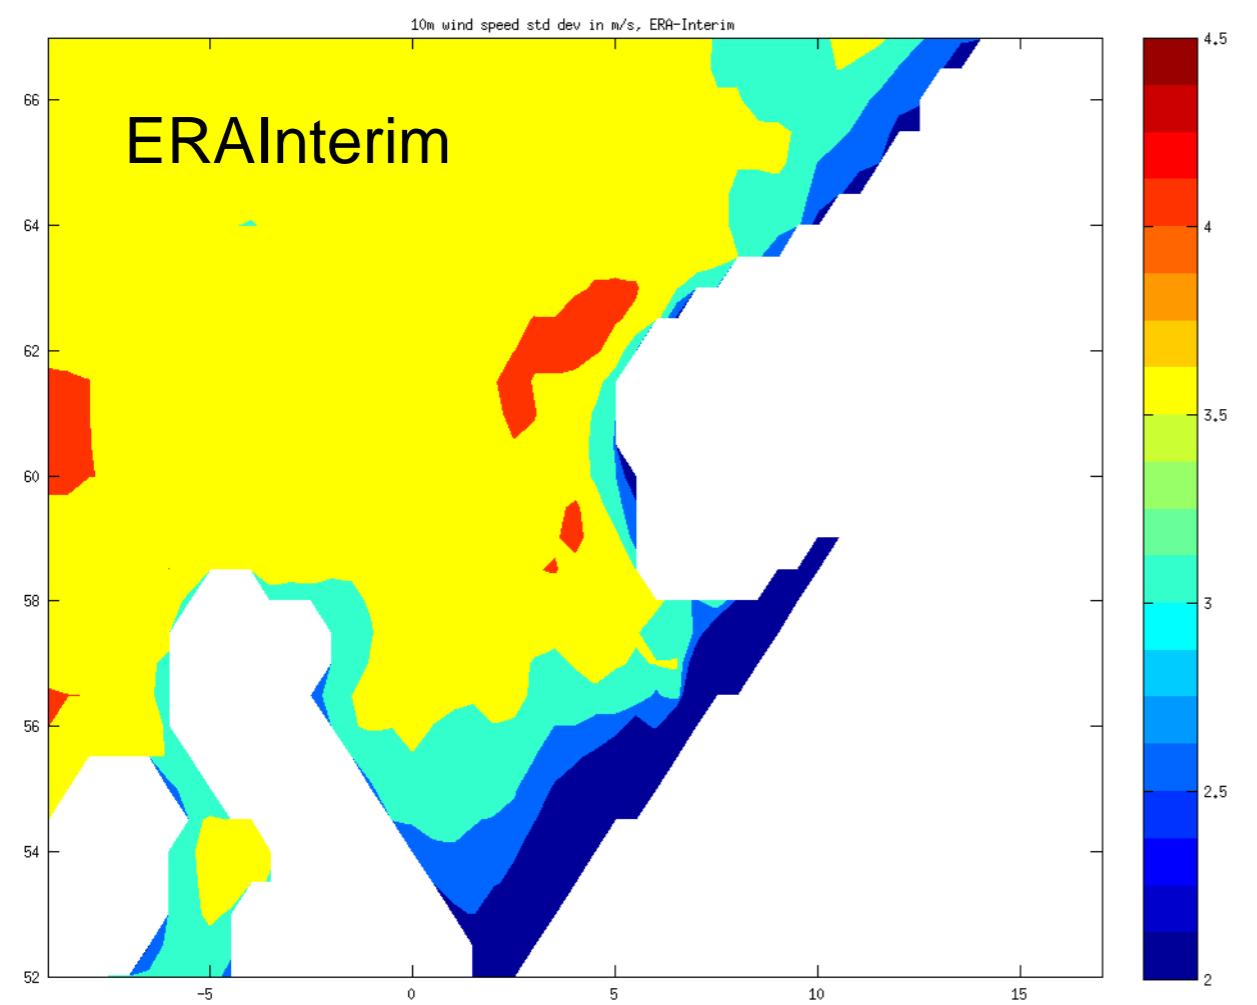

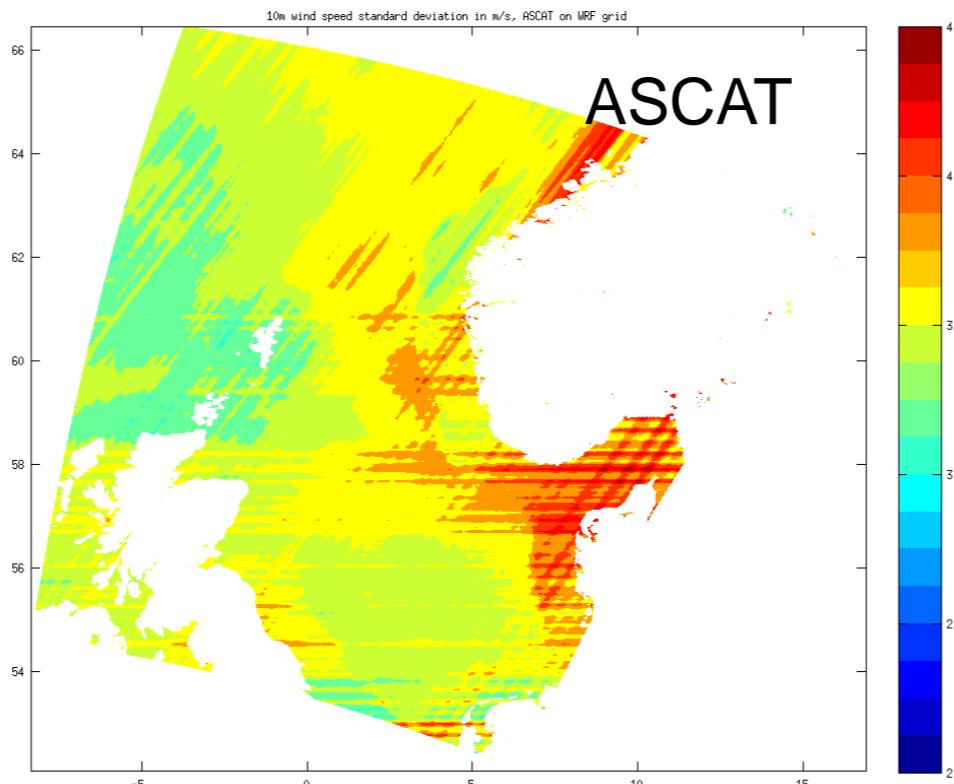

ERAInterim

WRF3km

Standard deviation

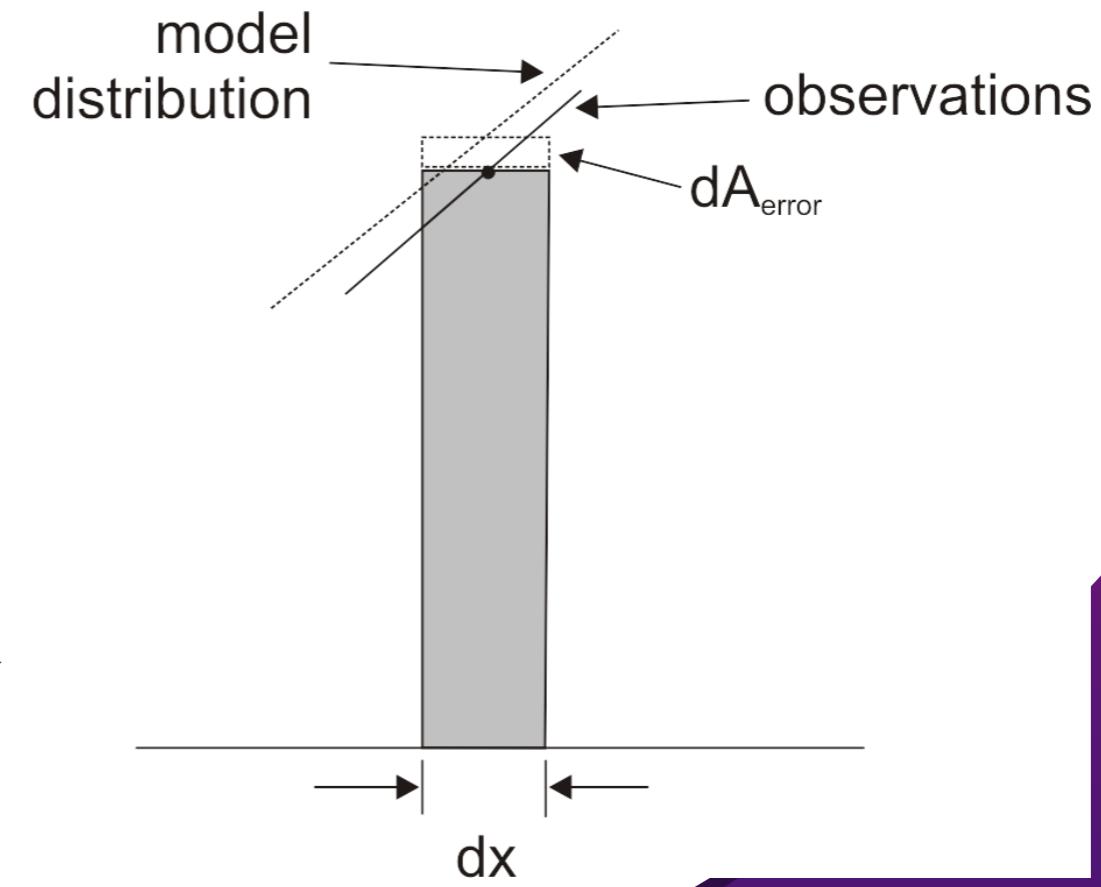

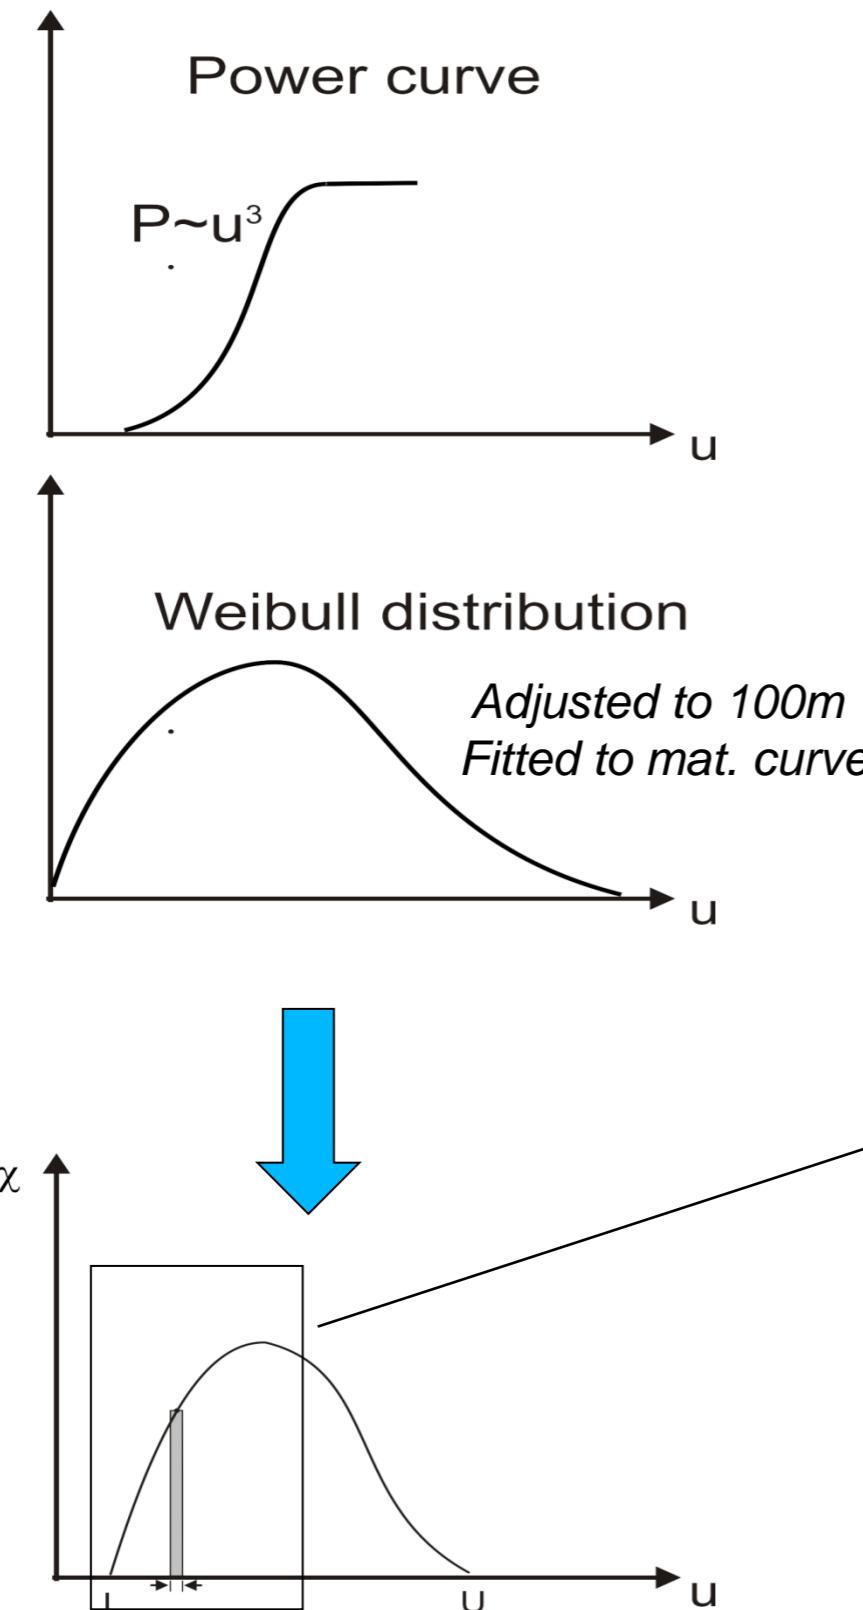

Comparison with radiosondes

for year 2008
Bias (mod-obs) / RMSE

	Ekofisk <1km height		Lerwick <1km height		Thorshavn <1km height		Sola <1km height	
	RMSE	bias	RMSE	Bias	RMSE	bias	RMSE	bias
9km Outer grid	3.55 m/s	-0.51 m/s	3.84 m/s	-0.15 m/s	5.05 m/s	1.13 m/s	4.42 m/s	1.67 m/s
3km Inner grid	3.61 m/s	-0.46 m/s	3.86 m/s	-0.23 m/s			4.24 m/s	1.49 m/s
	Ekofisk @100m		Lerwick @100m		Thorshavn @100m		Sola @100m	
	RMSE	bias	RMSE	bias	RMSE	bias	RMSE	bias
9km Outer grid	3.16 m/s	-0.69 m/s	3.23 m/s	1.33 m/s	3.53 m/s	-0.30 m/s	4.53 m/s	4.00 m/s
3km Inner grid	3.14 m/s	-0.57 m/s	3.04 m/s	0.75 m/s			3.76 m/s	3.05 m/s

Wind power skill score

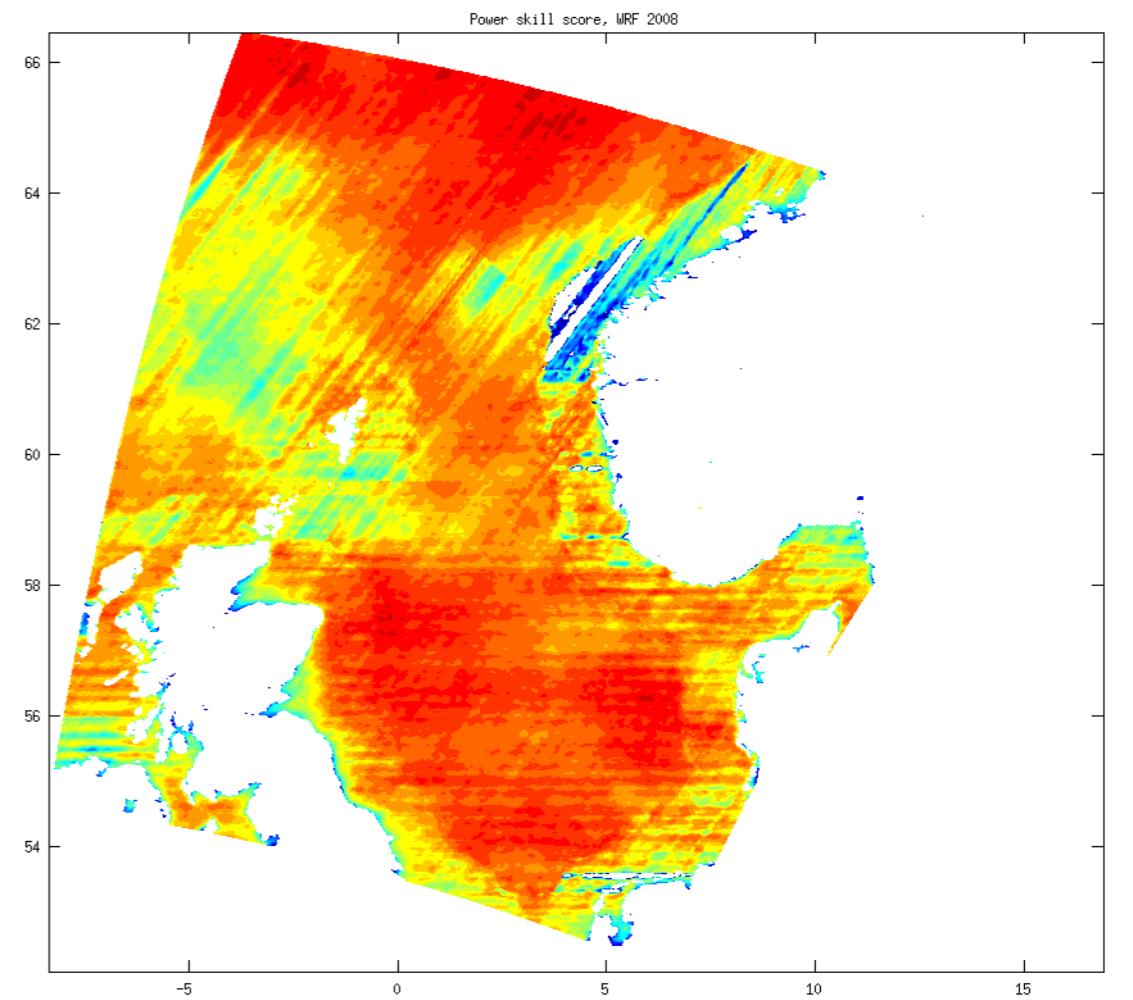

Wind power skillscore -2008

ERAInterim

WRF3km

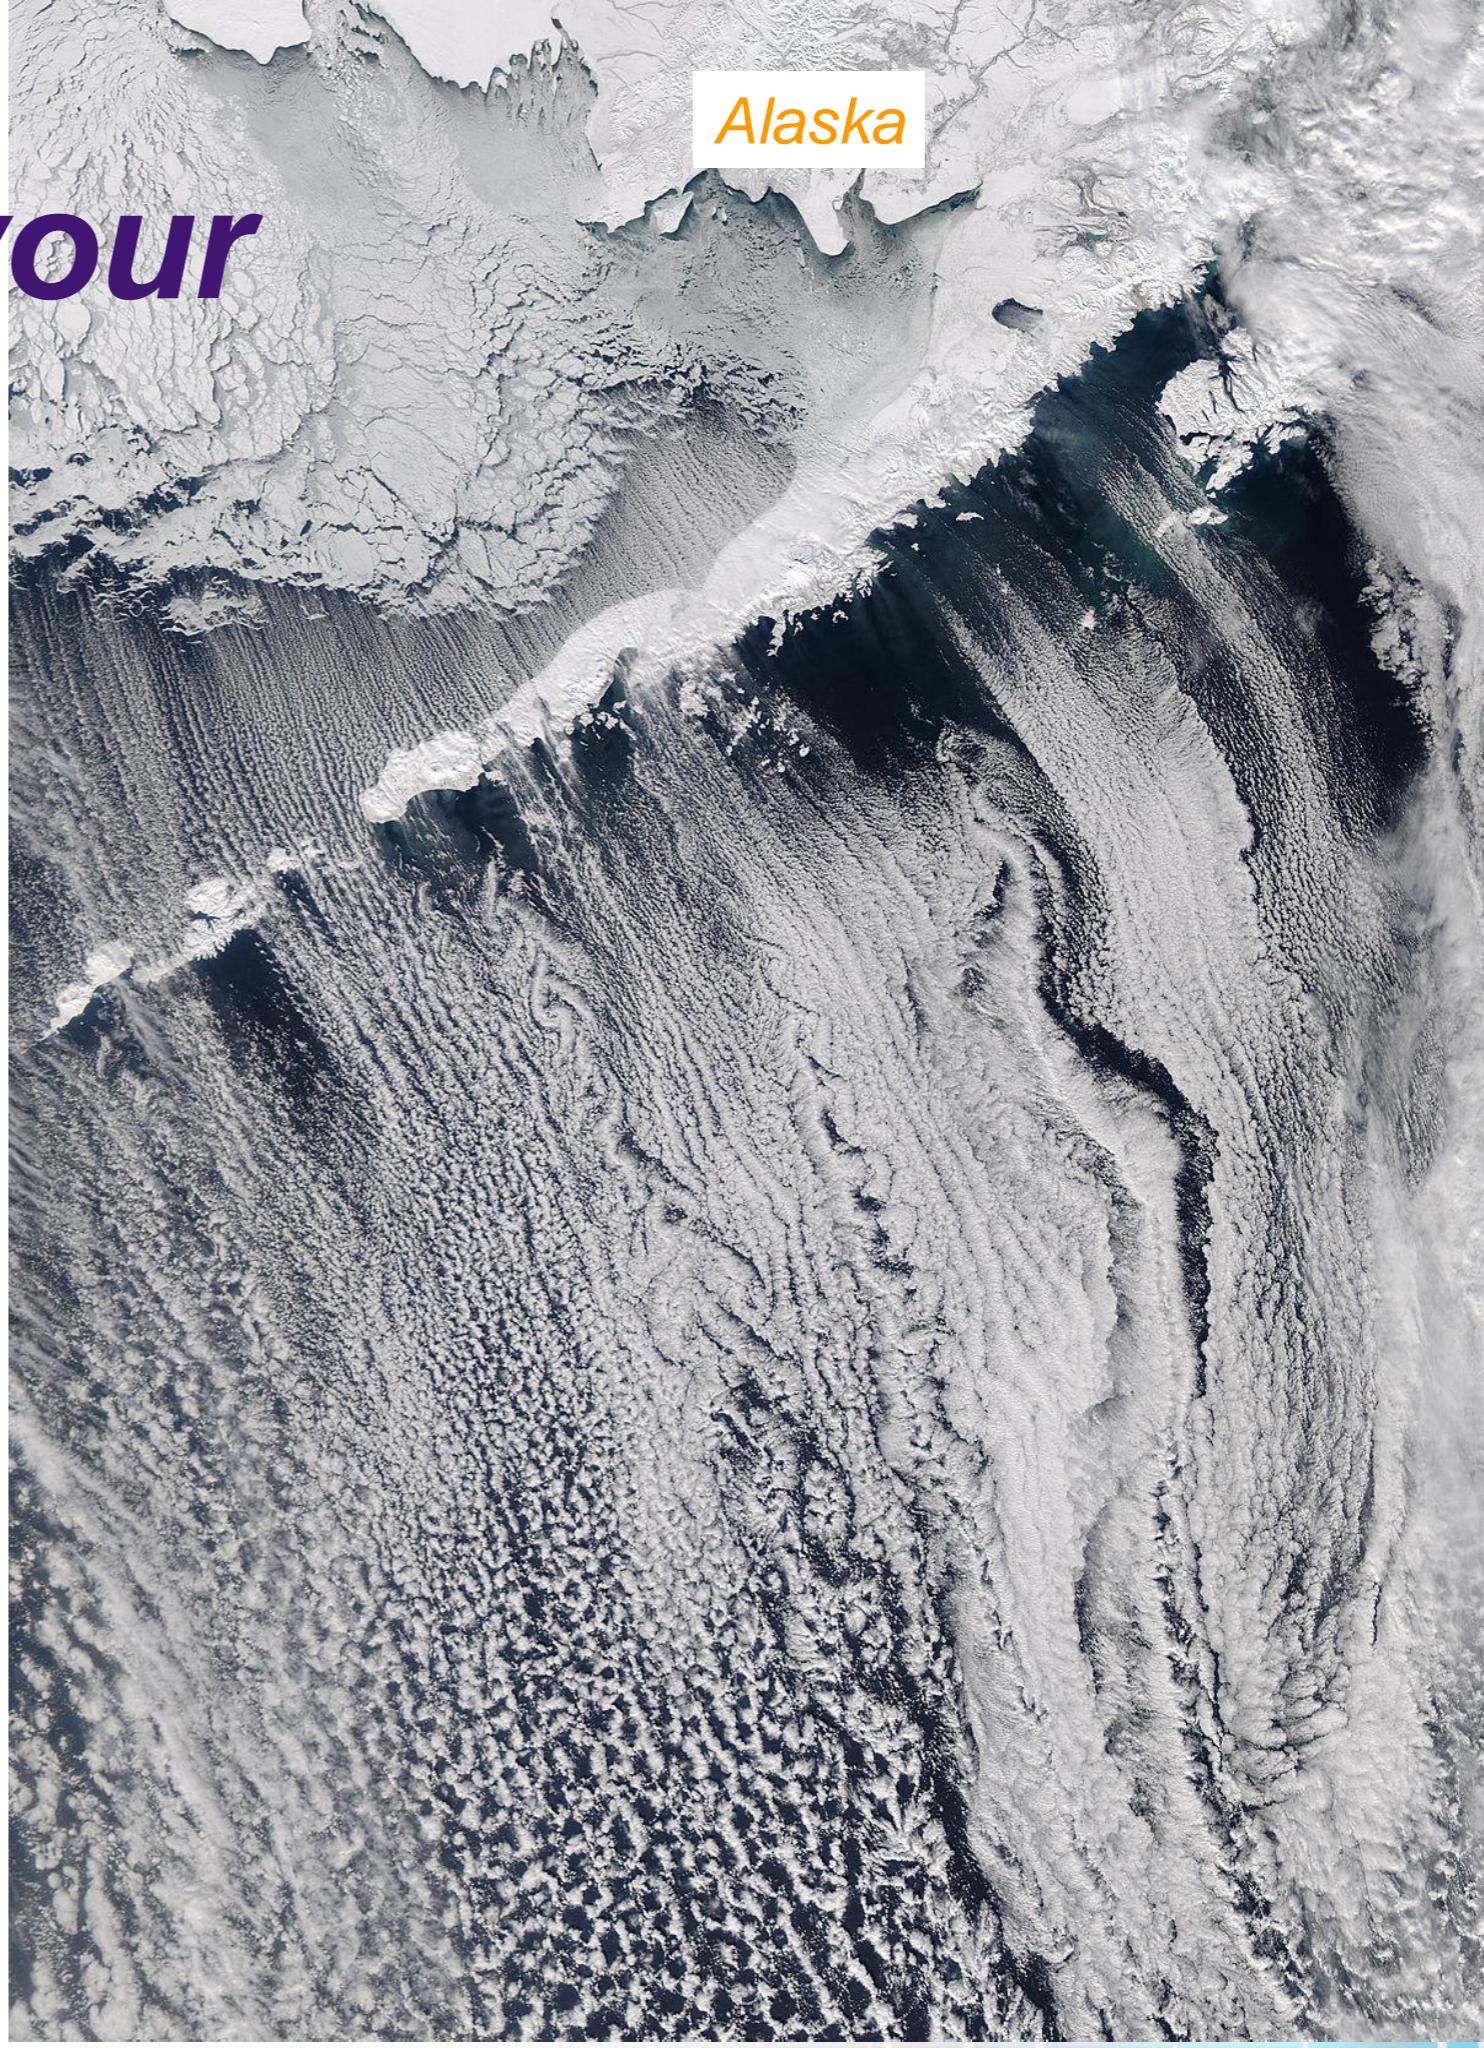

Conclusions

- A 3km-gridded downscaled reanalysis shows
 - small BIAS
 - very good distribution wrt. wind energy purposes
- Careful steps for evaluation is necessary
- More work is needed on wave and wave coupling before this can be implemented

*Thank you for your
attention!*
