**For immediate release**

## **New SCADA Solution helps users increase availability**

**With the launch of a new, web-based SCADA Solution, MiScout Web, Mita-Teknik gives the user 24/7 online access to production data and instant alarm handling – effectively ensuring the user increased availability and optimized operations.**

The new web-based, SCADA Solution enable users to connect to their turbine or Wind Park and monitor production, availability, alarms, weather conditions and more via a standard web-browser, smartphone or tablet. This allows users to react to alarms and shifts in weather conditions instantly – ensuring increased availability, decreased OPEX and in the end higher profits.

“By enhancing the user-experience and offering greater accessibility, we want to ensure that our customers get the highest possible ROI when investing in our solutions, and we believe they will with our MiScout Web and App Solutions.” – Jesper Andersen, CEO.

### **MiScout – Web and App**

MiScout Web is a Cloud solution, where the customer can choose a hosted solution or host the solution themselves. The customer-hosted solution is ideal for customers with large setups that require complete control and therefore need the full Gateway SCADA System installed on their local server. This solution offers the utmost in flexibility and user-customization.

Having Mita-Teknik host the solution, mean that Mita-Teknik provides access to the Gateway SCADA System through the Cloud. This solution is well-suited for customers with smaller setups, who value cost-efficiency over in-depth surveillance.

The MiScout App is an extension of MiScout Web that can be downloaded for both Android and iOS platforms. It provides the information that the turbine owner/operator needs to stay on top of operations 24/7.

MiScout Web and MiScout App are officially released at EWEA 2013 in Vienna, February 4-7. For more information, visit us at [www.mita-teknik.com](http://www.mita-teknik.com).

---

Mita-Teknik is a key supplier of control systems for wind turbines worldwide and we have been in the business of control systems since 1969. Our track record is continuously proven, as more than 42,000 wind turbines equipped with our state-of-the-art systems, daily deliver optimal performance and unsurpassed reliability. We develop and manufacture control systems, power panels and technology to wind turbines and today we are the One-Stop-Shop of some of the world's leading wind turbine manufacturers. In the recent years, Mita-Teknik has grown into a global organization with local representation all over the world. This has made us the market- and technology leader of our industry.
