“ My standout memory is to see all the wind industry gathered in Paris. Being there with a strong and unified message “aim high” showed that wind energy has a major role to play in the energy transition just a few days before the opening of the COP21. ”

Antoine Cahuzac  
 CEO, EDF Energies Nouvelles

“ The EWEA conference continued with high levels of participation and lived up to its standard of Aiming High. We galvanised support from politicians, we demonstrated that as an industry we are up to the challenge ahead and we showed to the world the significance of our products in a cleaner more sustainable future. This was the EWEA conference that will be remembered for many years. ”

Cliff Harris  
 GM, GE Renewable Energy EMEA
